

Design Sprint Day 2

Notes

The goal of the app we will be building will be to build a website that users will be able to log onto and use to help research and pick out classes available at UNCC the app will be used as an all-in-one website that a user will be able to successfully research questions regarding classes and gain a further understanding of what possibilities are available to them in the school not just with classes but in campus activities such as job fairs and clubs.

Features

Some features we hope to implement will be the ability to create group discussions allowing students to reply with their own experiences and form discussions as well as allow users to search for specific topics based on classes so they may be able to look into what courses are offered for subjects they may be interested in. Another feature we hope to flesh out is a very specialized search which will allow for the ability to search for classes that are as close to the needs of a user with specific interest.
